Once Again, Less IS More

Announcing a new, smaller 3' x 5' panel with proven big benefits

GreenGlass[®] fiberglass-faced gypsum tile backer board now makes it easier than ever to ensure even your smaller-space projects get the maximum moisture and mold protection so critical in high-moisture and high-humidity areas. GreenGlass is a superior tile substrate for walls, ceilings, shower and tub enclosures, countertops and floors. As versatile as it is tough, GreenGlass tile backer is ideal for wet areas, non-wet areas, and even non-tile areas. And with a standard-setting level of recycled content – at least 90% – GreenGlass delivers big-time for green building. Plus, like full-size panels it also offers:

- Two thicknesses – ¼" and ½" for new applications as well as remodeling
- Naturally mold-resistant glass mat facers and TemShield[®]-treated core
- Lighter weight and easier to handle than cement board
- Faster and cleaner cutting – simply score and snap
- Built-in moisture barrier eliminates additional application step
- Meets IBC and IRC code standard (ASTM C1178) for wet-area tile substrate
- Limited Lifetime Warranty*

ISO 14021
